SUMMARY

Technical software engineer with experience designing, automating, and optimizing enterprise-scale IT systems and data workflows across cloud and ERP environments. Proven ability to improve system performance, ensure data integrity, and implement scalable solutions aligned with business and compliance requirements. Experienced in process improvement, system lifecycle management, and cross-functional collaboration. Strong background in automation, data analysis, and integrating distributed systems to support operational efficiency and decision-making.

EXPERIENCE

Software Developer II

Compassion International

04/2023 – Present

Duties & Accomplishments

- Lead development and optimization of enterprise payment processing systems integrating NetSuite ERP and AWS cloud infrastructure, supporting millions of financial transactions annually
- Designed and implemented automated workflows for payment lifecycle processing, improving system efficiency and reducing manual intervention
- Evaluated system performance, identified inefficiencies, and implemented enhancements to improve scalability, reliability, and throughput across distributed systems
- Developed and maintained event-driven architectures using AWS Lambda, SNS, and SQS to automate system integrations and real-time data processing
- Built and enhanced RESTful APIs to standardize system interactions and support consistent business operations across multiple platforms
- Integrated Snowflake data warehouse with ERP systems to support reporting, batch processing, and operational visibility

- Implemented idempotent processing mechanisms across 6M+ records to ensure data accuracy, eliminate duplication, and maintain system integrity
- Designed and deployed automated data anonymization workflows to support compliance requirements and ensure proper data handling across environments
- Collaborated with stakeholders, business partners, and external vendors to define requirements and align technical solutions with operational needs
- Developed and executed testing strategies (unit, integration, acceptance) to ensure system reliability and production stability
- Analyzed system data and processing outcomes to identify discrepancies and implement corrective actions

Key Impact

- Improved system processing performance by **3400%** through workflow redesign and system optimization
- Eliminated duplicate financial transactions across millions of records through enhanced data validation and lifecycle controls
- Increased operational efficiency and reduced manual workload through automation of payment processing pipelines

Software Engineer

Merkle, Inc

03/2022 – 04/2023

Duties & Accomplishments

- Developed backend systems and automation tools using Node.js to support large-scale client promotions and digital campaigns
- Designed automation workflows that reduced operational costs by approximately **\$2 million annually**
- Evaluated system vulnerabilities and implemented solutions to mitigate bot traffic and prevent service disruption
- Translated business requirements into technical solutions and coordinated with internal teams and third-party vendors
- Improved documentation and internal processes to enhance team efficiency and consistency in delivery
- Participated in agile development processes including sprint planning, backlog refinement, and iterative delivery

Software Engineering Mentor

VetsWhoCode

03/2021 – 03/2025

Duties & Accomplishments

- Mentored transitioning veterans into software engineering roles through 1:1 pair programming and technical guidance
- Assisted developers in understanding system architecture, debugging issues, and implementing scalable solutions
- Reviewed code and provided feedback to improve performance, readability, and maintainability
- Collaborated with leadership to define feature roadmaps and improve platform functionality
- Supported development of web applications using React.js and Next.js

TECHNICAL SKILLS

- Programming: TypeScript, JavaScript, Node.js, Go
- Cloud & Infrastructure: AWS (Lambda, SNS, SQS), Terraform
- Data & Databases: SQL, MySQL, Snowflake
- Systems: REST APIs, Event-Driven Architecture, System Integration
- Practices: Automation, Testing (Unit/Integration), CI/CD
- Tools: Git

EDUCATION

Master of Science – Software Engineering (In Progress)

Grand Valley State University

Bachelor of Science – Information Technology

American Military University — 06/2021
